

PIPE IDENT, no more wrong material

Intelligent Material Conveying with PIPE IDENT

Integration of the material handling into the line control is a logical step for the development of the PLAST-CONTROL system.

The newly developed pipe identification system used in combination with our material handling makes incorrect coupling of raw material pipes a thing of the past.

The system has the advantage of using a wireless sensor on the flexible pipe which does not need a power of source, with the fixed side connected to the control system. The flexible side and fixed side are paired via the menu system. If the incorrect pipes are connected then a warning signal is given on the coupling and start-up of the loading system is suppressed.

In this way the production costs and raw material can be saved.

POINTS OF INTEREST

- Wireless pipe coupling
- Hall-wide transparency
- Illustration of all silo-stations and daily silos up to the gravimetric of the extruder
- Conveying of wrong material is suppressed
- Displaying of all pipe connections
